Resume / Curriculum Viate

Yenuan Iesus
Gordillo Osorno

Motto

Those who see the beauty in being totally unprepared for the life they are living, can learn out of honest and playful curiosity.

Aptitudes

Problem solver.
'Can do' attitude.
Highly motivated to learn.
Team player: I like to help or to be helped.

Looking for

Challenging environments, to get exposed to knowledge. To learn from others and be open to teach anything I can. I love organized and well structured team work.

Personal Information

Birth Date: 2 June 1989
Driving License: Yes
Nationality: Mexico
Languages: Spanish (First Language), English (Written and Spoken)

Recommendation letters available upon request

Profile

Profile Overview, keywords and short thoughts on each discipline. Programming and Computer Science is my main area of interest.

Experience

5+ years working experience and description of what I personally oversaw and the technologies I've got exposed to during that period.

Education

Source of the knowledge I have acquired over the years.

Graphic Design

Information Design
User Experience
Graphic interfaces
Photography

Animation

Motion Graphics
Video Editing
Post-production

Development

Client Side / Server Side
TCP/IP, HTTP, FTP, SSH
OOP, MVC, RESTFUL
OS: OSX/LINUX/WIN
IDE: Sublime Text
Tools: Vagrant, Git, Gogs

Web Services

Web Design
System Architecture
VPS / Hosting
CDN (Highwinds)
AWS, DigitalOcean

Freelance

2007-2010
Web Design, Product Design, Photography.

Televisa

2010-2013
Animation, Design Web Master, Developer.

Onvos

2013-2016
Lead Programmer and Designer.

Graphic Design, Photography and Web Design.
Keywords: Canon, Design, HDR Photography, Retouch, Photoshop, Illustrator, Print, Grids, Animation, Flash, HTML/CSS.

Marketing Assistant.
Keywords: After Effects, Motion, Final Cut, Premiere, Cinema 4D, PHP, MySQL, Wordpress, Design, Corporate Identity, Video on demand, Live Streaming, Filming.

Lead programmer.
Keywords: Video on demand, Live Streaming, 2 million + monthly video play events, MySQL, PHP, JavaScript (Vanilla, NodeJS, Express, VideoJS) Front End and Back End, LiveBurst API (In house dev), APIs (Google Analytics, Highwinds CDN), Nginx, Apache, DigitalOcean, REST.

I finished basic education, up to the equivalent of High School.

I also took a Technical Career at the age of 16 (Programmer Analyst).

Most of what I know and do has come through experimentation and desire to pursue my goals, I'm very used to learn on my own and look for the resources or online courses I may need to follow my passions and goals.

Graphic Design

Finding the best way to make things clear, understandable, and useful.

Whatever it is that I'm working on, from posters, photography or websites, it is always rewarding to design things to fit its purpose.

Design is a big part of my background, thinking about function and needs, influences a lot what I do.

Animation

I started doing motion graphics back in 2010-2011 when I was working for Televisa.

From conceiving the substance of a message to filming of promotional videos, then post-production and last but no least, complementary animated graphics.

Development

I got started on development with simple websites, some are still alive and some other not.

Eventually it became my passion, from just designing websites I moved onto more complicated development.

What I'm most proud of is **www.onvosliveburst.com,** a Video on Demand and Live Streaming platform. I was in charge of backend UI, Video Player (VOD & Live). I also took big part in coming up with a business model and shaping the platform to fit client business needs.

Web Services

I'm familiar wiht the basics of managing a web server. Linux, command line (Bash), setting up and beware of Firewall configuration plus hardening (Fail to ban and the likes).

During the development of **Onvos LiveBurst,** I was exposed to the environment required to create an API driven web application and custom satellite web servers for Live Streaming (Nginx + FFMPEG + NodeJS) all backed by a CDN (Highwinds), while shipping code was done with the help of GIT.

Highlights:

International Airport Hermanos Serdán (PBC): Photography and web design (The website has been changed since then) .

Televisa Puebla (Local TV station): Make the Graphic Identity come alive for screen, all done with Motion and Final Cut. Big Format photography for usage as stage props.

Magazine 10 Poblano: Photography, Logo, Branding, First Printed Issue and Website.

Hotel InFashion, Playa del Carmen: USB pen drive with Flash (ActionScript3) for promotion purposes.

As a marketing assistant, I actually got involved in a lot of things, mostly out of interest.

I was hired to give life to the local news portal, back then I used **wordpress and a custom made theme**, that could fit the desired workflow. I also oversaw the **operation and implementation of the local tv Live Stream** transmission plus **video on demand, and website monetization**.

I also played a role in **video post-production, marketing, design and the overall channel 3 branding and corporate image**.

With the experience gained in Televisa, I've got the opportunity to work for a small company called Onvos.

Here I helped co-create two platforms, a **CMS called Bonfire (API first centralized Content Management System),** but over time our focus shifted to the **second platform, LiveBurst, a service for VOD and Live Streaming focused in video monetization**. I collaborated to shaped the backend and implemented a video player capable of VAST, VPAID, IMAP from different ad sources for Video on demand (Native formats) and Live Streaming (HLS, native and Flash).

Highlights:

Technical Career.
Técnico Programador Analista.
ICA (Instituto de Computación Aplicada).

Source of Knowledge / Influences

Lynda.com:
Programming: HTML/CSS Javascript, PHP, NodeJS, MySQL, Foundations of Programming
Design: After Effects, Cinema 4D, Premiere, Photoshop, and Illustrator

Books or Articles about:
Object Oriented Programing, Design patterns in JS/PHP, Data Normalization.

Crash courses (Knows basics):
Java, C, C++, Phyton, Ruby, CoffeeScript, Electronics, Shell Scripting, Jade, Angular, and other frameworks, etc.
